The future of work is Agentic

In not-so-distant future companies will be expressing their org charts not only in number of FTEs [full-time employees] but also in number of agents being deployed in every part of the organization. We are going into a world where you'll have to think about your workforce as both agentic and human.

Co-Innovation ~ Develop Together, Succeed Together

Disruption is the new normal and innovation is the answer. We work with organizations to prototype and develop breakthrough ideas to reinvent business models, create new products, and open markets. Co-invest to shape the genesis of new science and technology.

Digital TWIN Supply-Chain (Oil-Gas)

Poorti - the digital twin of oil-gas supply chain is a virtual replica of physical assets, processes, and systems that enables real-time monitoring, simulation, and optimization of O&G supply chain.

By integrating data from sensors, equipment, and logistics, Poorti provide a dynamic view of operations starting from the refinery, transported through a network of pipelines, ships, railways, and road tankers to regional depots. From these depots, the refined products are further distributed to retail outlets, ensuring a steady and efficient supply to end consumers.

This end-to-end visibility enables proactive decision-making, reduces operational risks, and enhances overall supply chain performance.

Digital TWIN Zero Paper

Zero-Paper - the digital twin solution is designed to eliminate manual document handling and streamline workflows. This system creates a virtual representation of all paper-based documents, enabling secure digital stamping-signing, structured storage, easy retrieval, and real-time tracking of document status.

By digitizing and modeling the entire lifecycle of paperwork—from creation to archival—the solution enhances operational efficiency, ensures compliance, and supports seamless collaboration across departments. It serves as a smart framework for managing documents intelligently, reducing errors, saving time, and supporting sustainability goals.

Data-AI-Analytics

You have mountains of data and you know there is real business value hiding in it. You also know that data by itself has little value. It is what you do with that data that creates tangible business improvements. **RBHU** acts as **a force multiplier** for your **Data-AI-Analytics** and **data science** initiatives.

CONNECT seamlessly to any application, device or data source
Integration & API Management
Events & Messaging
Process Automation

UNIFY intelligently for better access, trust, and control

Collaborative Intelligence Humans and AI Work Smarter Together

In not-so-distant future companies will be expressing their org charts not only in number of FTEs [full-time employees] but also in number of agents being deployed in every part of the organization. We are going into a world where you'll have to think about your workforce as both agentic and human.

When India's leading companies need agentic automation, they turn to us.

AI is transforming work at an unprecedented pace, opening new possibilities and ushering in an era of the autonomous enterprise. It's already happening as AI and automation join forces to deliver massive productivity gains as humans work faster, smarter, and more cost-effectively. Humans are the key: the most successful enterprises won't replace workers; they'll augment them with agentic process automation collaborators.

We at **RBHU** are committed to deliver world-class enterprise-level solutions.

RBHU has top-notch program management team, deep technology and architecture capability, next-generation delivery capabilities, and the technology tools needed to execute large-scale programs.

We are constantly finding innovative ways to blend people, process and technologies to deliver bottom-line benefits to our customers.

We measure our contributions through increased **customer satisfaction, client retention rates** and **value delivered**.
